

Jahrestagung der Gesellschaft für Genetik- Kassel 2003

Annual Meeting of the German Genetics Society Kassel 2003

"Epigenetics"

September 26 - 29, 2003

The annual meeting 2003 of the **German Genetics Society** (GfG) was held at **Kassel University** from 26.9.2003 to 29.9.2003. The conference did focus on "Epigenetics" i.e. imprinting, chromatin organization, DNA methylation, histone modification, transcriptional and posttranscriptional gene silencing, RNA interference and small non-coding RNAs.

These fields are not only rapidly expanding but also merging. We believe that "Epigenetics" is an exciting and timely topic. We are also encouraged by the fact that several outstanding scientists in this research area have already confirmed their participation.

The GfG is aware of its important role in mediating the public understanding of science. To improve the information and education of the public on issues of genetics we will organize a workshop during the conference.

Contact and organization:

Wolfgang Nellen (nellen@hrz.uni-kassel.de)
Christian Hammann (c.hammann@uni-kassel.de)
Markus Kuhlmann (mkuhlmann@uni-kassel.de)
